Our *Premium Series* Silt Fence is designed to offer the highest soil filtering efficiency and the lowest flow rate to meet strict sediment control requirements. This highly engineered Silt Fence is DOT approved in many states and meets the needs of the most demanding applications. Utilizing style #2130 filter fabric, water is allowed to pass through the fabric, while costly suspended soil particles are trapped to settle to the ground. This restricts the loss of costly jobsite material, keeps our roads free of mud, and protects our lakes and streams from harmful silt build-up.
