Our *Premium Series NH DOT* Silt Fence filter fabric is designed to offer the highest soil filtering efficiency and the lowest flow rate to meet strict sediment control requirements by The State of New Hampshire. Utilizing style #2130 filter fabric, water is allowed to pass through the fabric, while costly suspended soil particles are trapped to settle to the ground. This restricts the loss of costly jobsite material, keeps roads free of mud, and protects our lakes and streams from harmful silt build-up. Premium fabric, air driven wide crown staples and heavy-duty solid hardwood stakes combine for the best filtration on the market today.
